1. About this Extension

Next Day Eligibility automates a Yes/No *Next Day Eligible* attribute on every product based on real-time stock quantity, and restricts configured next-day shipping methods at checkout when any cart item is not eligible.

Products fulfilled by a drop-ship supplier can be exempted from this restriction via a per-product **Drop-Ship Eligible** flag — even when local stock is zero, those products remain next-day eligible because the supplier ships directly.

Storefront product detail page — the green “Next Day Eligible” badge is rendered just below the price.

Key Features

ETechFlow • Next Day Eligibility for Magento 2

4 / 17

- Auto-managed `next_day_eligible` attribute, recomputed on stock save and product save
- Per-product `drop_ship_eligible` override for supplier-shipped goods
- Green / grey eligibility badge on the product detail page
- Configurable shipping method codes blocked at checkout when any cart item is ineligible
- Multi-shipping aware — eligibility evaluated per shipping address
- Configurable, grouped, and bundle parents propagate from their child items
- Per-store-view configurable badge labels and method codes

2. System Requirements

Component	Supported Version
Magento Open Source / Adobe Commerce	2.4.4, 2.4.5, 2.4.6, 2.4.7, 2.4.8
PHP	8.1, 8.2, 8.3
Composer	2.x (only required for Method B)
MySQL / MariaDB	As required by your Magento version
Search engine	OpenSearch / Elasticsearch (no extra config)

3. Pre-Installation Checklist

Complete these steps before extracting any files. They protect your store from broken caches and partial installs.

1 Back up your Magento installation

Take a full backup of `app/code`, `app/etc`, and your database. The Adobe Commerce backup tool, `mysqldump`, or your hosting provider's snapshot tool all work.

2 Set Magento to developer or default mode

Production mode requires extra steps for static content deployment. Switch to developer mode for installation:

```
php bin/magento deploy:mode:show
php bin/magento deploy:mode:set developer
```

You can return to production mode after installation completes.

3 Disable cache before installing

Disable all caches via the admin: **System** → **Tools** → **Cache Management**, select all, and choose *Disable*. Or run:

```
php bin/magento cache:disable
```

4 Verify maintenance access

Make sure you have SSH or terminal access to the server that runs Magento. Manual upload alone is not sufficient — you must run CLI commands to enable the module.

Note: Running `setup:upgrade` while customers are checking out can cause errors on their carts. Schedule the install during a low-traffic window or enable maintenance mode (`php bin/magento maintenance:enable`).

4. Installation — Method A: Manual Upload

Use this method if you received the module as a `.zip` archive (purchased directly from eTechFlow or transferred manually).

1 Unpack the archive

Extract `etechflow-module-next-day-eligibility-1.0.0.zip` on your local machine. Inside you will find the `ETechFlow/NextDayEligibility/` folder.

2 Create the module directory on your server

SSH to your Magento server. From the Magento root:

```
mkdir -p app/code/ETechFlow
```

3 Upload the extension files

Upload the `NextDayEligibility` folder (everything you extracted) into `app/code/ETechFlow/`. Use SFTP, rsync, or your IDE's deploy feature.

Final path on the server should be:

```
app/code/ETechFlow/NextDayEligibility/registration.php
app/code/ETechFlow/NextDayEligibility/etc/module.xml
... (rest of the module files)
```

4

Enable the module

From the Magento root, run:

```
php bin/magento module:enable ETechFlow_NextDayEligibility
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy -f
php bin/magento cache:flush
```

For multi-language stores, append every locale code to the deploy command, e.g.

```
setup:static-content:deploy -f en_US en_GB .
```

Done. Skip ahead to section 6 (Post-Installation Verification).

5. Installation — Method B: Composer

Use this method if you have access to a Composer repository hosting the module (private Satis, Packagist, or eTechFlow's repository).

1 Add the repository (skip if already configured)

```
composer config repositories.etechflow composer https://repo.etechflow.com
```

2 Require the package

```
composer require etechflow/module-next-day-eligibility:^1.0
```

Composer will prompt for credentials if the repository is private. Use the access keys provided with your purchase.

3 Run the same enable / upgrade commands

```
php bin/magento module:enable ETechFlow_NextDayEligibility
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy -f
php bin/magento cache:flush
```

Tip: If you originally use Magento Marketplace access keys, place them in `auth.json` at your Magento root before running `composer require`.

6. Post-Installation Verification

After installation, confirm the module is loaded and working before continuing to configuration.

6.1 Verify the module is enabled

```
php bin/magento module:status ETechFlow_NextDayEligibility
# Expected output: Module is enabled
```

6.2 Verify the data patches ran

Two product attributes should now exist: `next_day_eligible` and `drop_ship_eligible`.
Check via SQL:

```
SELECT attribute_code FROM eav_attribute
WHERE attribute_code IN ('next_day_eligible', 'drop_ship_eligible');
```

6.3 Visit any product detail page

You should see a **green “Next Day Eligible”** or **grey “Standard Delivery Only”** badge directly below the price. If the badge does not appear, hard-refresh the page (the static content may be cached) and verify the cache was flushed.

7. Configuration

Configuration lives at **Stores** → **Configuration** → **eTechFlow** → **Next Day Eligibility**.

7.1 General Settings

Field	Description	Default
Enable Module	Master on/off switch.	Yes
Next Day Shipping Method Codes	Comma-separated <code>carrier_method</code> codes that should be hidden when any cart item is not eligible.	<code>flatrate_flatrate</code>
Label: Next Day Eligible (Yes)	Green badge text shown on eligible products.	Next Day Eligible
Label: Next Day Eligible (No)	Grey badge text shown on non-eligible products.	Standard Delivery Only

7.2 Drop-Ship Exception

The *Drop-Ship Exception* group contains an explanatory note. The actual per-product flag is on the product edit page (see section 8.2).

Finding shipping method codes: Method codes follow the pattern `carrier_method` (e.g. `flatrate_flatrate` , `ups_NEXTDA`). Inspect the `quote_shipping_rate` table for the exact codes used by your carriers, or read them from **Stores** → **Configuration** → **Sales** → **Delivery Methods**.

8. Using the Extension

8.1 How eligibility is calculated

Each time a stock item or product is saved, the observer applies this rule:

```
next_day_eligible = (qty > 0 AND stock_status = in_stock)
                   OR (drop_ship_eligible = Yes)
```

Stock state	Drop-Ship Eligible	Result
In stock with qty ≥ 1	—	Eligible
Out of stock or qty = 0	No	Not eligible
Out of stock or qty = 0	Yes	Eligible (supplier ships directly)

8.2 Setting Drop-Ship Eligible per product

1. Open the product in **Catalog** → **Products**.
2. Scroll to the **eTechFlow Shipping** attribute group.
3. Set **Drop-Ship Eligible** to **Yes**.
4. Click **Save**.

The product save observer immediately re-evaluates eligibility, so customers who already have the product in their cart will see the updated state on their next checkout page reload.

8.3 Configurable, grouped, and bundle products

Parent products inherit eligibility from their children: the parent is **eligible** if at least one child is eligible, otherwise **not eligible**. The badge on the parent product page reflects this aggregate.

8.4 Checkout behaviour

If any item in the customer's cart has `next_day_eligible = No`, all method codes listed in the configuration are removed from the available shipping rates. This applies to the standard one-page checkout, the REST API, and any headless integration that uses Magento's shipping rate calculation.

Multi-shipping checkout: When a customer ships items to multiple addresses, each address is evaluated independently. An address with all-eligible items keeps next-day shipping options, even if a different address in the same order has a non-eligible item.

9. Uninstallation

9.1 Remove product attributes (optional)

If you want to delete the eligibility attributes and all their stored data:

```
php bin/magento eav:attribute:remove next_day_eligible
php bin/magento eav:attribute:remove drop_ship_eligible
```

9.2 Disable and remove the module

```
php bin/magento module:disable ETechFlow_NextDayEligibility
composer remove etechflow/module-next-day-eligibility # Composer install only
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento cache:flush
```

If installed manually, also delete the directory:

```
rm -rf app/code/ETechFlow/NextDayEligibility
```

10. Troubleshooting

“Next Day Eligible” badge does not appear

- Hard-refresh the page (Cmd+Shift+R or Ctrl+Shift+R) — your browser may have cached the old page.
- Run `php bin/magento cache:flush`.
- Verify the module is enabled: `php bin/magento module:status ETechFlow_NextDayEligibility`.
- Check `var/log/exception.log` for module-related errors.

Next-day method is still showing despite OOS items

- Verify the method code in **Stores** → **Configuration** → **eTechFlow** → **Next Day Eligibility** matches the actual carrier/method code (e.g. `ups_NEXTDA` not `ups_nextda`).

- Confirm the OOS product is not flagged **Drop-Ship Eligible = Yes** (which intentionally bypasses the restriction).
- Reindex: `php bin/magento indexer:reindex` .

Eligibility didn't update after I changed Drop-Ship

- The product save observer recomputes eligibility on every save where the drop-ship value changes. If your save did not actually change the value, no recompute runs.
- Force a refresh by saving the stock item (any qty change works) — the stock observer recomputes too.

11. Support & Contact

If you encounter any issue not covered by this guide, get in touch with our support team. We aim to respond within one business day.
