Module	ETechFlow_NextDayEligibility
Version	1.0.0
Compatibility	Magento Open Source & Adobe Commerce 2.4.4 – 2.4.8
PHP	8.1, 8.2, 8.3
License	Proprietary
Support	info@etechflow.com

eTechFlow

About this Extension

Next Day Eligibility

automates a Yes/No Next Day Eligible attribute on every product based on real-time stock quantity, and restricts configured next-day shipping methods at checkout when any cart item is not eligible.

Products fulfilled by a drop-ship supplier can be exempted from this restriction via a per-product **Drop-Ship Eligible flag** — even when local stock is zero, those products remain next-day eligible because the supplier ships directly.

Key Features

- Auto-managed next_day_eligible attribute, recomputed on stock save and product save
- Per-product drop_ship_eligible override for supplier-shipped goods
- Green / grey eligibility badge on the product detail page
- Configurable shipping method codes blocked at checkout when any cart item is ineligible
- Multi-shipping aware — eligibility evaluated per shipping address
- Configurable, grouped, and bundle parents propagate from their child items
- Per-store-view configurable badge labels and method codes

System Requirements

Component	Supported Version
Magento Open Source / Adobe Commerce	2.4.4, 2.4.5, 2.4.6, 2.4.7, 2.4.8
PHP	8.1, 8.2, 8.3
Composer	2.x (only required for Method B)
MySQL / MariaDB	As required by your Magento version
Search engine	OpenSearch / Elasticsearch (no extra config)

Pre-Installation Checklist

Complete these steps before extracting any files. They protect your store from broken caches and partial installs.

Step 1 — Back up your Magento installation.

Take a full backup of app/code, app/etc, and your database.

Step 2 — Set Magento to developer or default mode.

```
php bin/magento deploy:mode:show  
php bin/magento deploy:mode:set  
developer
```

Step 3 — Disable cache before installing.

```
php bin/magento cache:disable
```

Step 4 — Verify maintenance access.

You need SSH or terminal access to the server.

Note: Running setup:upgrade while customers are checking out can cause errors on their carts. Schedule the install during a low-traffic window or enable maintenance mode (php bin/magento maintenance:enable).

Installation — Method A: Manual Upload

Use this method if you received the module as a .zip archive.

Step 1 — Unpack the archive.

Extract etechflow-module-next-day-eligibility-1.0.0.zip on your local machine.

Step 2 — Create the module directory on your server.

```
mkdir -p app/code/ETechFlow
```

Step 3 — Upload the extension files.

Upload the NextDayEligibility folder into
app/code/ETechFlow/ so the final path is:

app/code/ETechFlow/NextDayEligibility/registration.php
app/code/ETechFlow/NextDayEligibility/etc/module.xml
... (rest of the module files)

Step 4 — Enable the module.

```
php bin/magento module:enable  
ETechFlow_NextDayEligibility  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy -f  
php bin/magento cache:flush
```

For multi-language stores, append every locale
code: setup:static-content:deploy -f en_US en_GB.

Done. Skip ahead to section 6 (Where to Find the Configuration).

Installation — Method B: Composer

01

Add the repository (skip if already configured).

```
composer config  
repositories.etechflow composer  
https://repo.etechflow.com
```

02

Require the package.

```
composer require  
etechflow/module-next-day-  
eligibility:^1.0
```

03

Run the same enable / upgrade commands.

```
php bin/magento module:enable ETechFlow_NextDayEligibility  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy -f  
php bin/magento cache:flush
```

Tip: If you use Magento Marketplace access keys, place them in auth.json at your Magento root before running composer require.

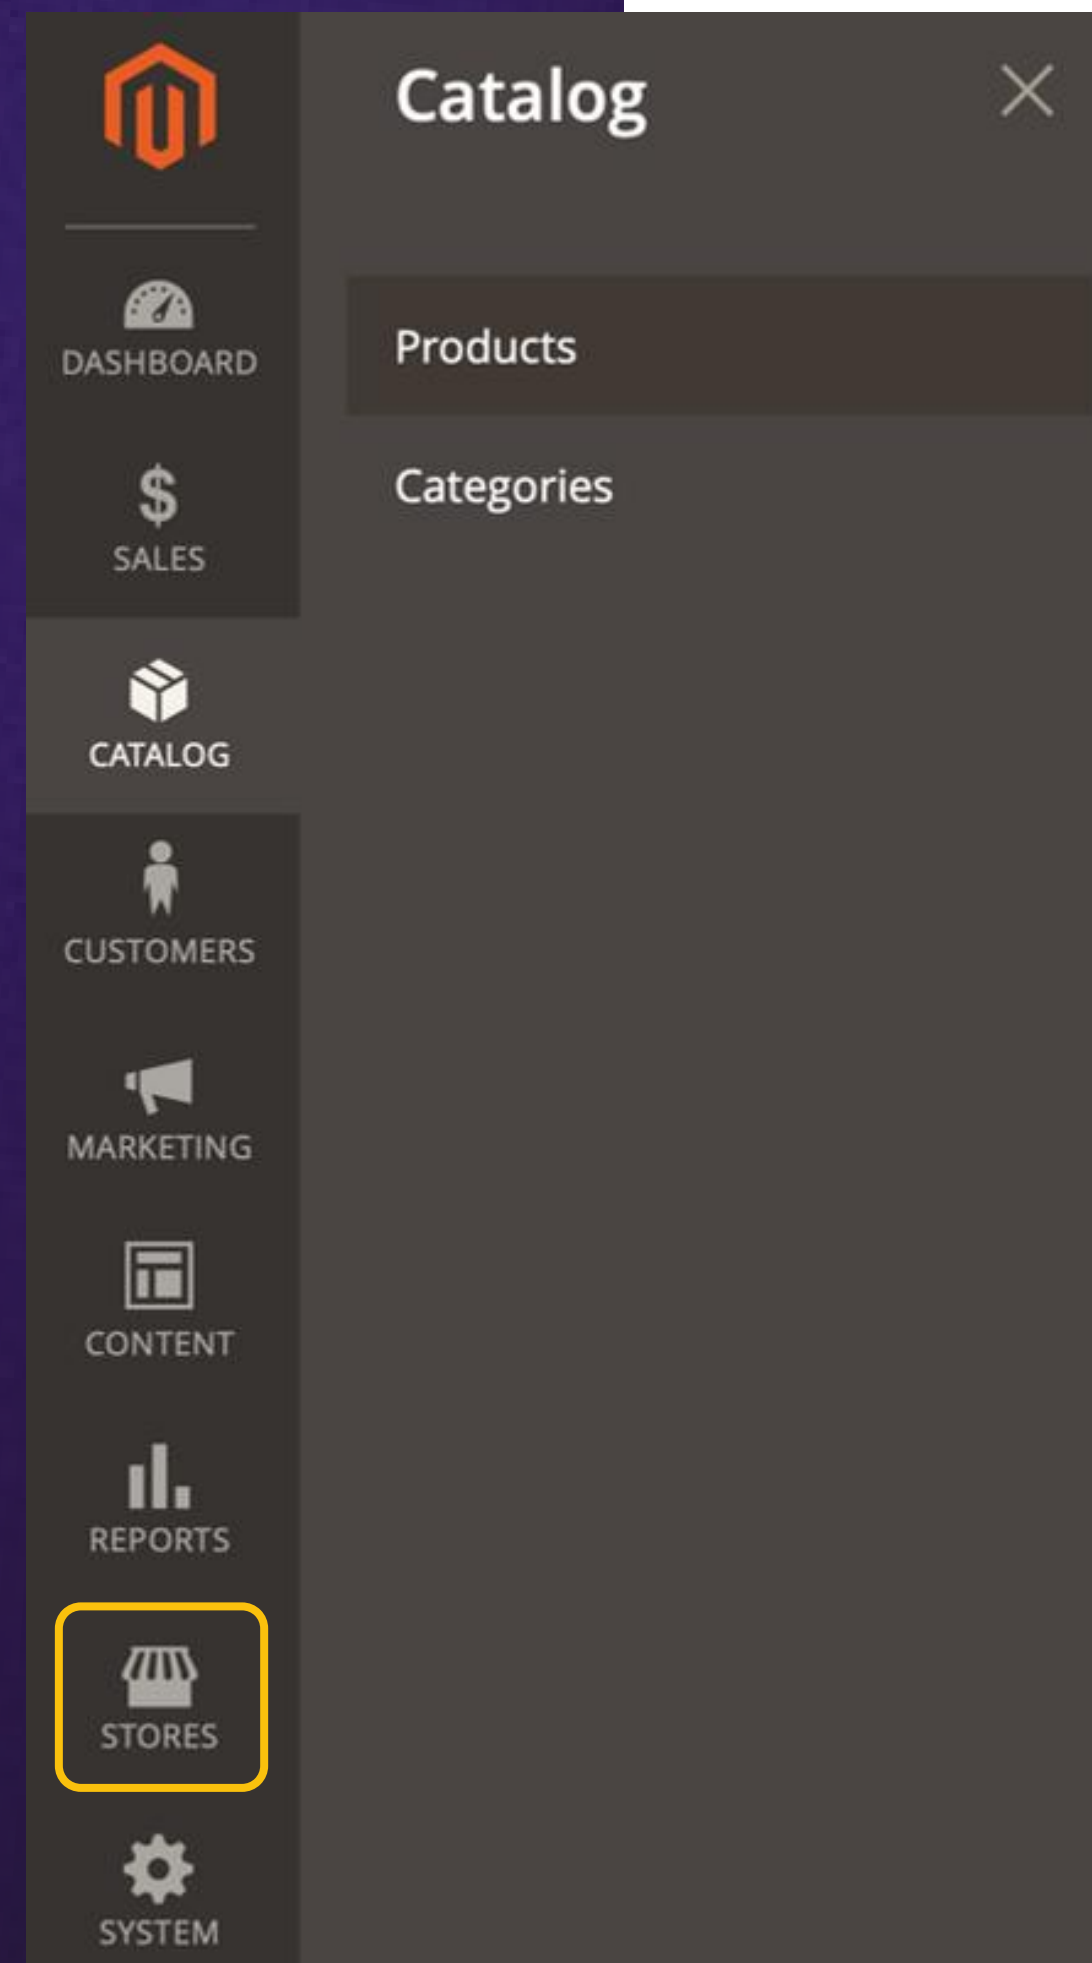

Where to Find the Configuration in the Magento Admin

After installation, the module's settings live inside the standard Magento configuration panel. Follow these steps once you've logged in to the admin.

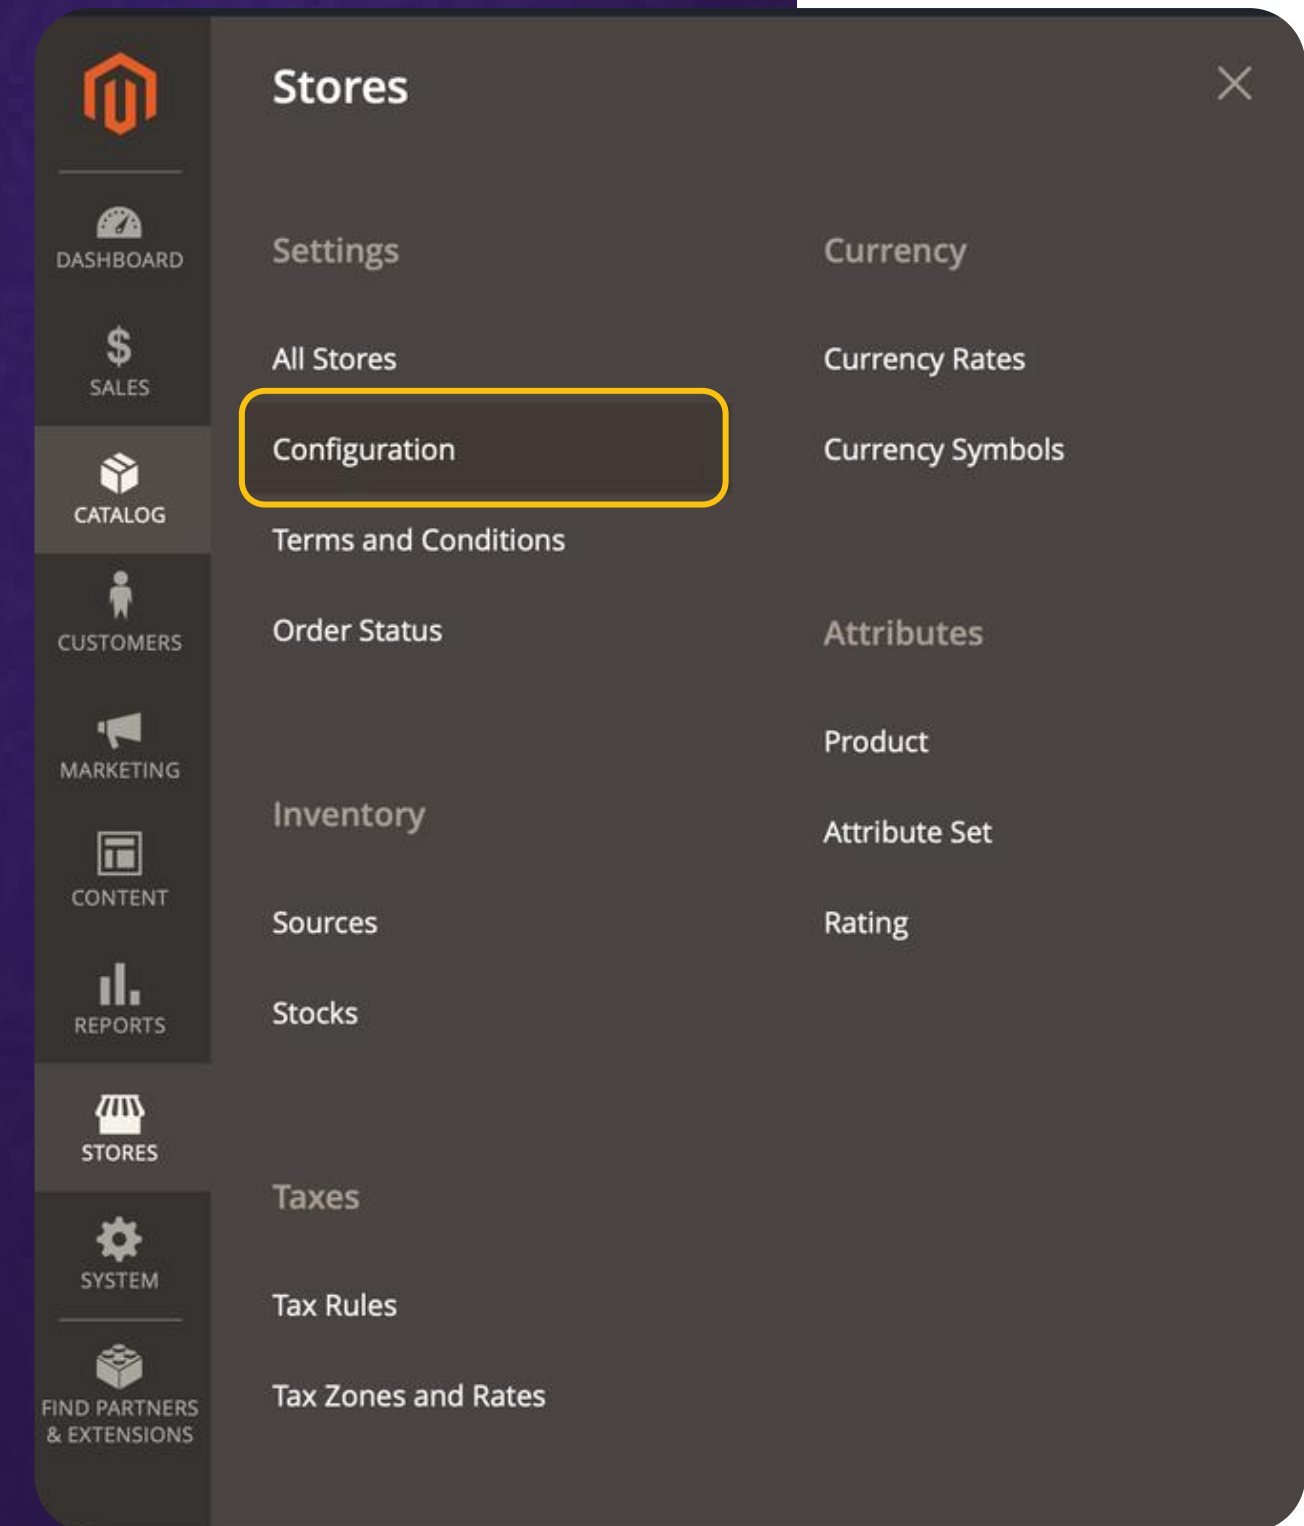

Step 1 — Open the Stores menu

In the left sidebar of the admin, click the Stores icon.

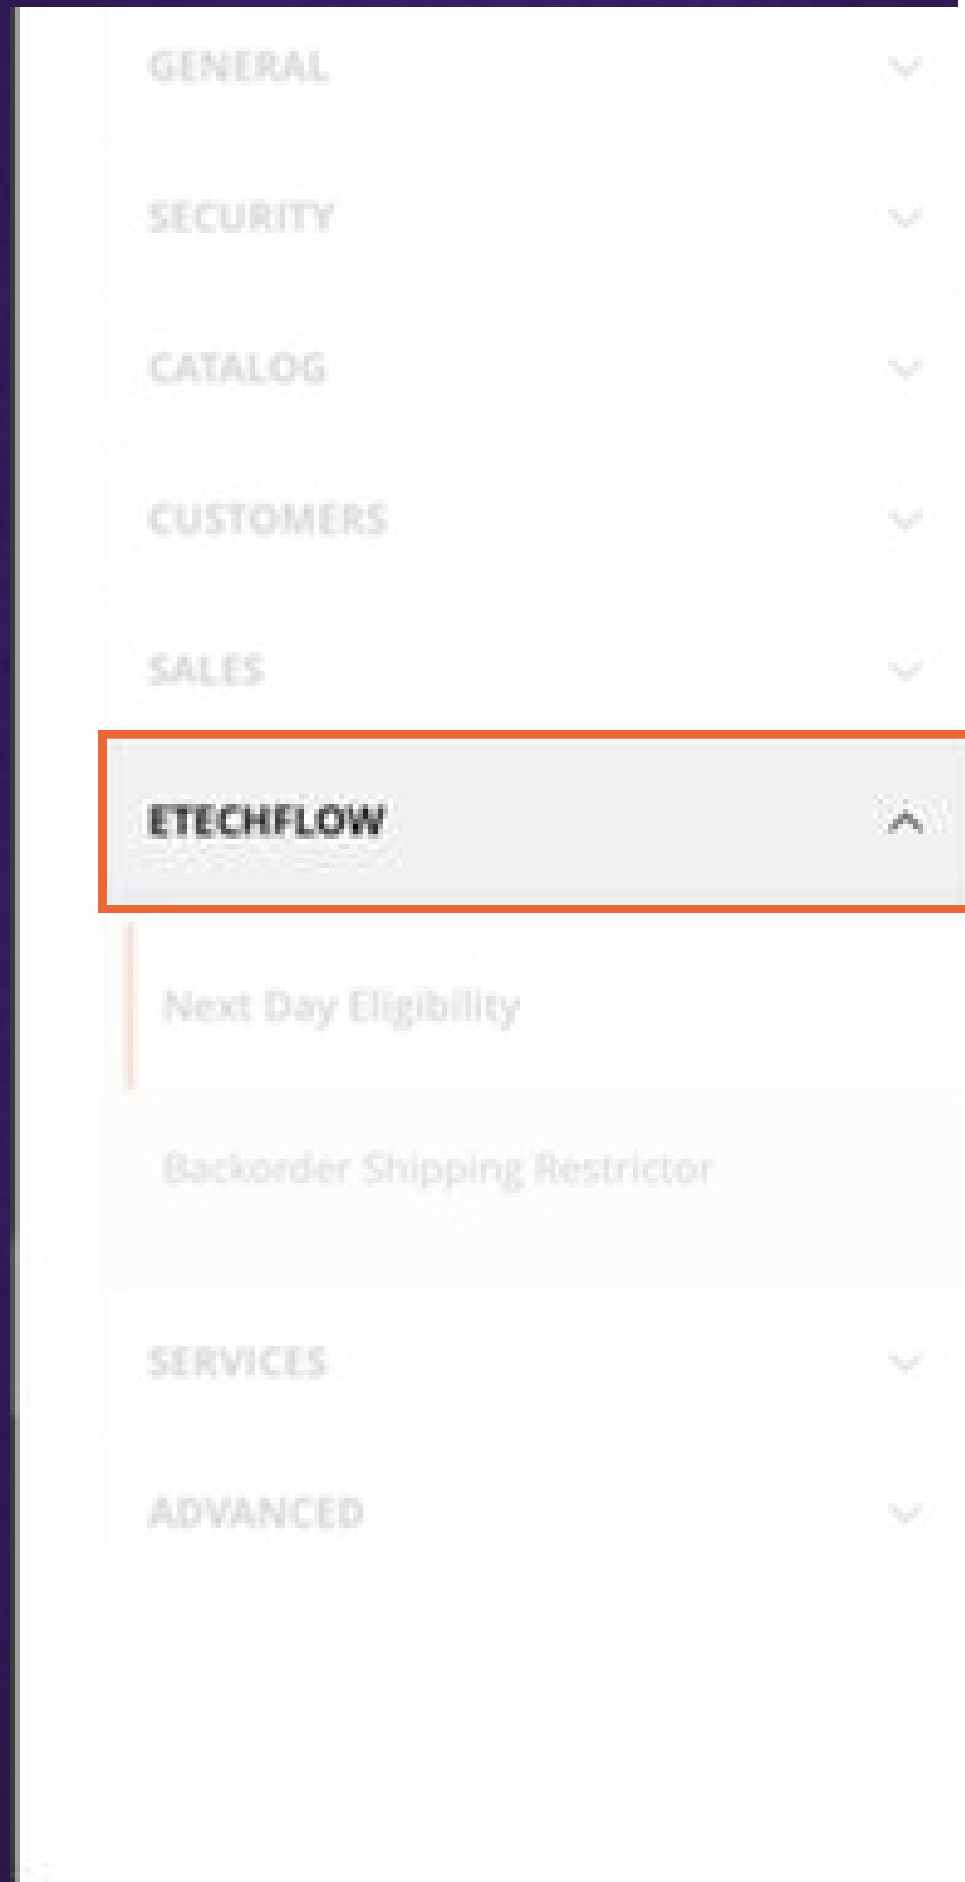

Step 2 — Click "Configuration"

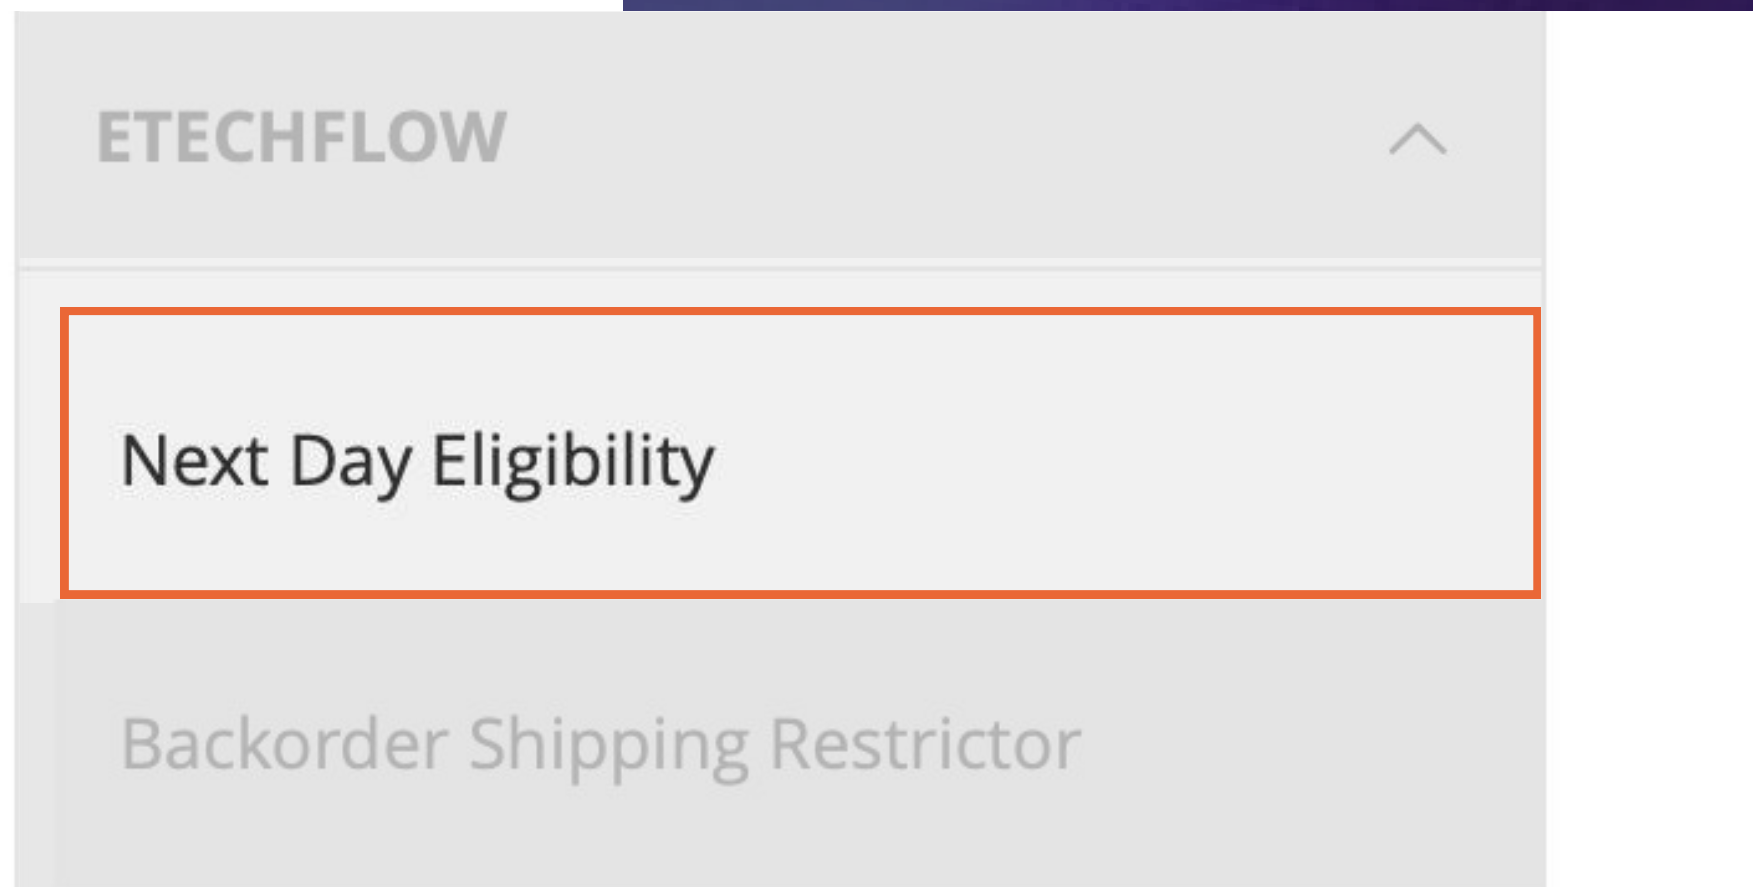

Inside the Stores flyout, under the Settings column, click Configuration.

Step 3 — Find the eTechFlow group in the left sidebar

The Configuration page loads with a left-side accordion of configuration groups (General, Security, Catalog, ...). Scroll down until you see ETECHFLOW and click it to expand.

Step 4 — Click "Next Day Eligibility"

When ETECHFLOW is expanded, you see two links: Next Day Eligibility and Backorder Shipping Restrictor. Click Next Day Eligibility.

Step 5 — You are now on the Next Day Eligibility configuration page

The right pane shows two collapsible sections: General Settings and Drop-Ship Exception. Click each section header to expand it.

General Settings

Enable Module (store view) ▾
Enable or disable the Next Day Eligibility module.

Next Day Shipping Method Codes (store view)
Comma-separated codes to restrict (e.g. flatrate_flatrate).

Label: Next Day Eligible (Yes) (store view)
Badge text shown on products that qualify for next day delivery.

Label: Next Day Eligible (No) (store view)
Badge text shown on products that do NOT qualify for next day delivery.

Drop-Ship Exception

How Drop-Ship Works (store view)
When a product is out of local stock, it is normally marked ineligible and next day shipping is blocked. The exception: if a product has **Drop-Ship Eligible = Yes** set on its edit page (under the eTechFlow Shipping attribute group), it remains next day eligible even when local stock is zero. This is for products fulfilled directly by a supplier such as Auto Remote who ships on your behalf the same day.

The image shows the 'General Settings' page in a Magento 2 admin interface. The left sidebar contains a menu with 'Next Day Eligibility' highlighted. The main content area is divided into two sections: 'General Settings' and 'Drop-Ship Exception'. The 'General Settings' section contains four fields: 'Enable Module' (set to 'Yes'), 'Next Day Shipping Method Codes' (set to 'flatrate_flatrate'), 'Label: Next Day Eligible (Yes)' (set to 'Next Day Eligible'), and 'Label: Next Day Eligible (No)' (set to 'Standard Delivery Only'). The 'Drop-Ship Exception' section contains a text field 'How Drop-Ship Works'. Three callout boxes with orange arrows point to specific fields: the first points to 'Enable Module', the second to 'Next Day Shipping Method Codes', and the third to 'Label: Next Day Eligible (No)'. A fourth callout box points to the 'Label: Next Day Eligible (Yes)' field.

Enable Module
Master on/off switch. **Yes**

Next Day Shipping Method Codes
Comma-separated carrier_method codes that should be hidden when any cart item is not eligible.
flatrate_flatrate

Label: Next Day Eligible (Yes)
Green badge text shown on eligible products.
Next Day Eligible

Label: Next Day Eligible (No)
Grey badge text shown on non-eligible products.
Standard Delivery Only

Finding shipping method codes:

Method codes follow the pattern carrier_method (e.g. flatrate_flatrate, ups_NEXTDA). Inspect the quote_shipping_rate table for the exact codes used by your carriers, or read them from **Stores → Configuration → Sales → Delivery Methods**.

Drop-Ship Exception

How Drop-Ship Works

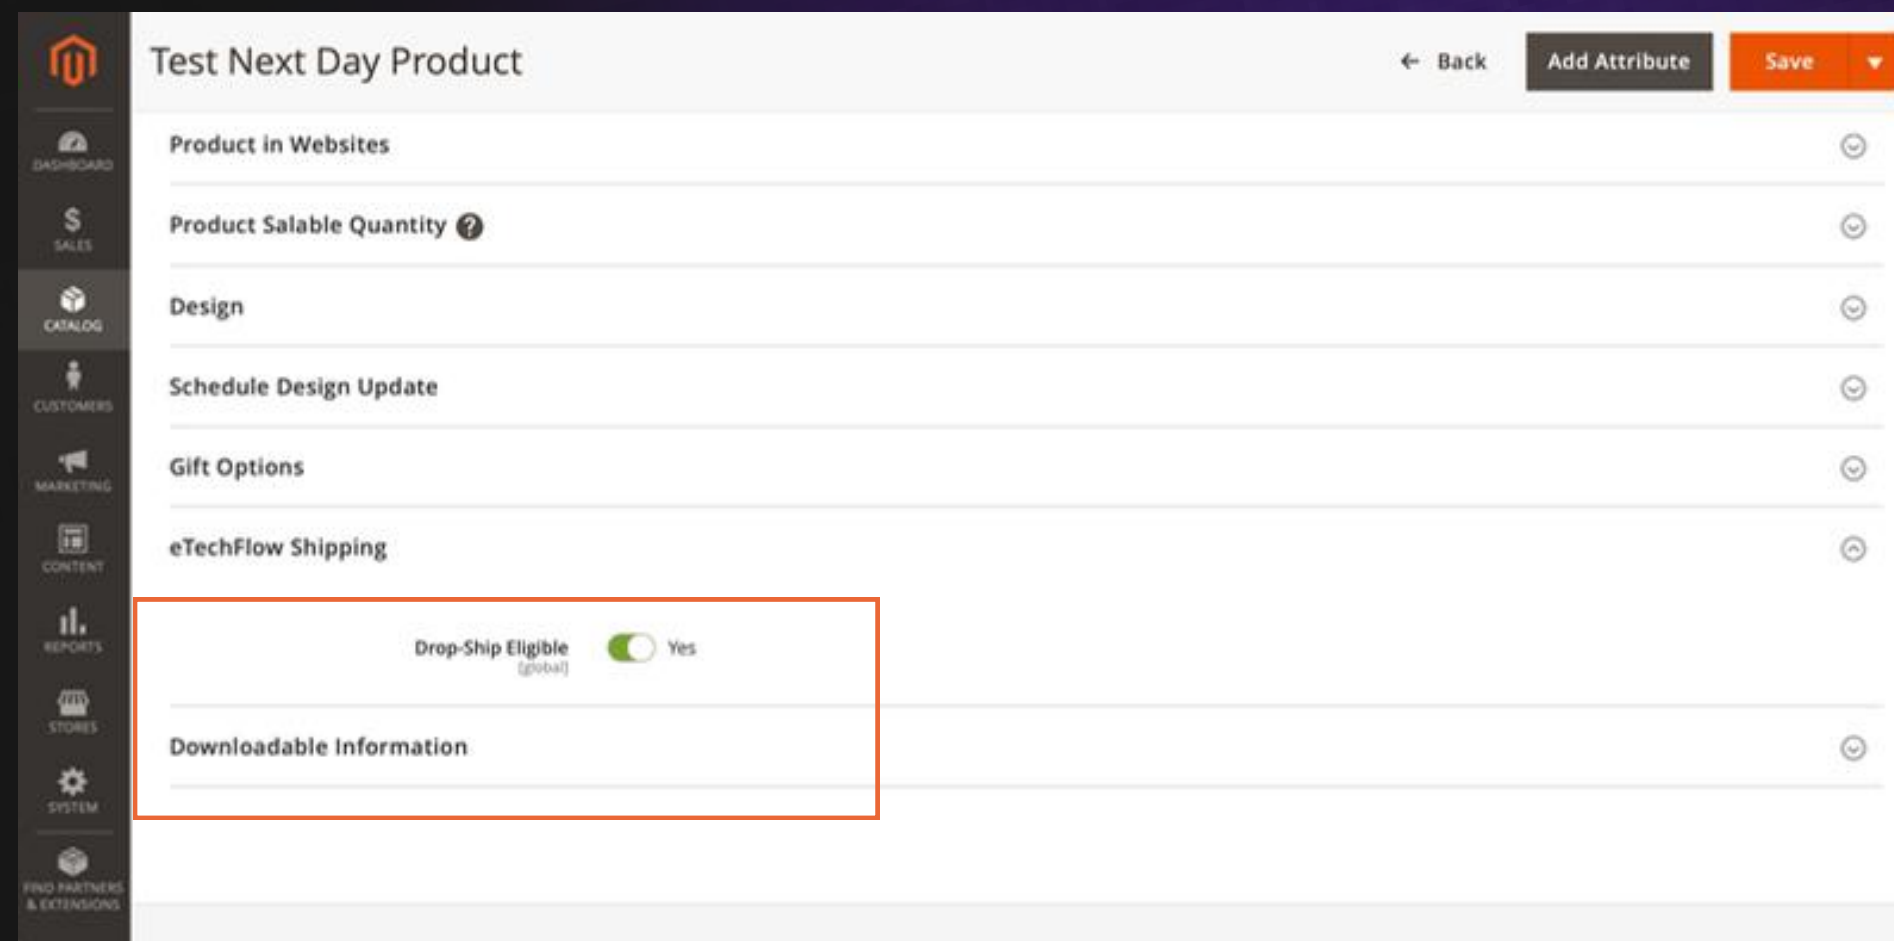

(store view)

When a product is out of local stock, it is normally marked ineligible and next day shipping is blocked. The exception: if a product has **Drop-Ship Eligible = Yes** set on its edit page (under the *eTechFlow Shipping* attribute group), it remains next day eligible even when local stock is zero. This is for products fulfilled directly by a supplier such as Auto Remote who ships on your behalf the same day.

This section contains an informational note explaining how the per-product Drop-Ship Eligible flag overrides stock-based eligibility. The actual flag is on the product edit page (see next page).

Setting Drop-Ship Eligible Per Product

For products that are fulfilled by a supplier (drop-ship), you can mark them as always next-day eligible — even when local stock is zero.

The screenshot shows a web interface for editing a product. The title is "Test Next Day Product". On the left is a sidebar with icons for Dashboard, Sales, Catalog, Customers, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area has a top bar with "Back", "Add Attribute", and "Save" buttons. Below this are several sections: "Product in Websites", "Product Salable Quantity", "Design", "Schedule Design Update", "Gift Options", and "eTechFlow Shipping". The "eTechFlow Shipping" section is expanded, showing a toggle for "Drop-Ship Eligible (global)" which is currently turned on (Yes). Below this is a section for "Downloadable Information".

Use case: Products sourced from a third-party supplier (e.g. Auto Remote) ship the same day directly from the supplier. Setting Drop-Ship Eligible = Yes ensures customers can always choose next-day delivery, even when your local quantity is zero.

Step 1 — Open the product

Go to Catalog → Products and edit any product.

Step 2 — Scroll to "eTechFlow Shipping" section

Scroll down the product edit page until you see the eTechFlow Shipping attribute group.

Step 3 — Set Drop-Ship Eligible to Yes and save

Toggle Drop-Ship Eligible to Yes and click Save at the top right.

The next time stock is saved for that product (or immediately on save), the observer re-evaluates eligibility and sets `next_day_eligible = Yes` regardless of local stock level.

How Eligibility Shows on the Storefront

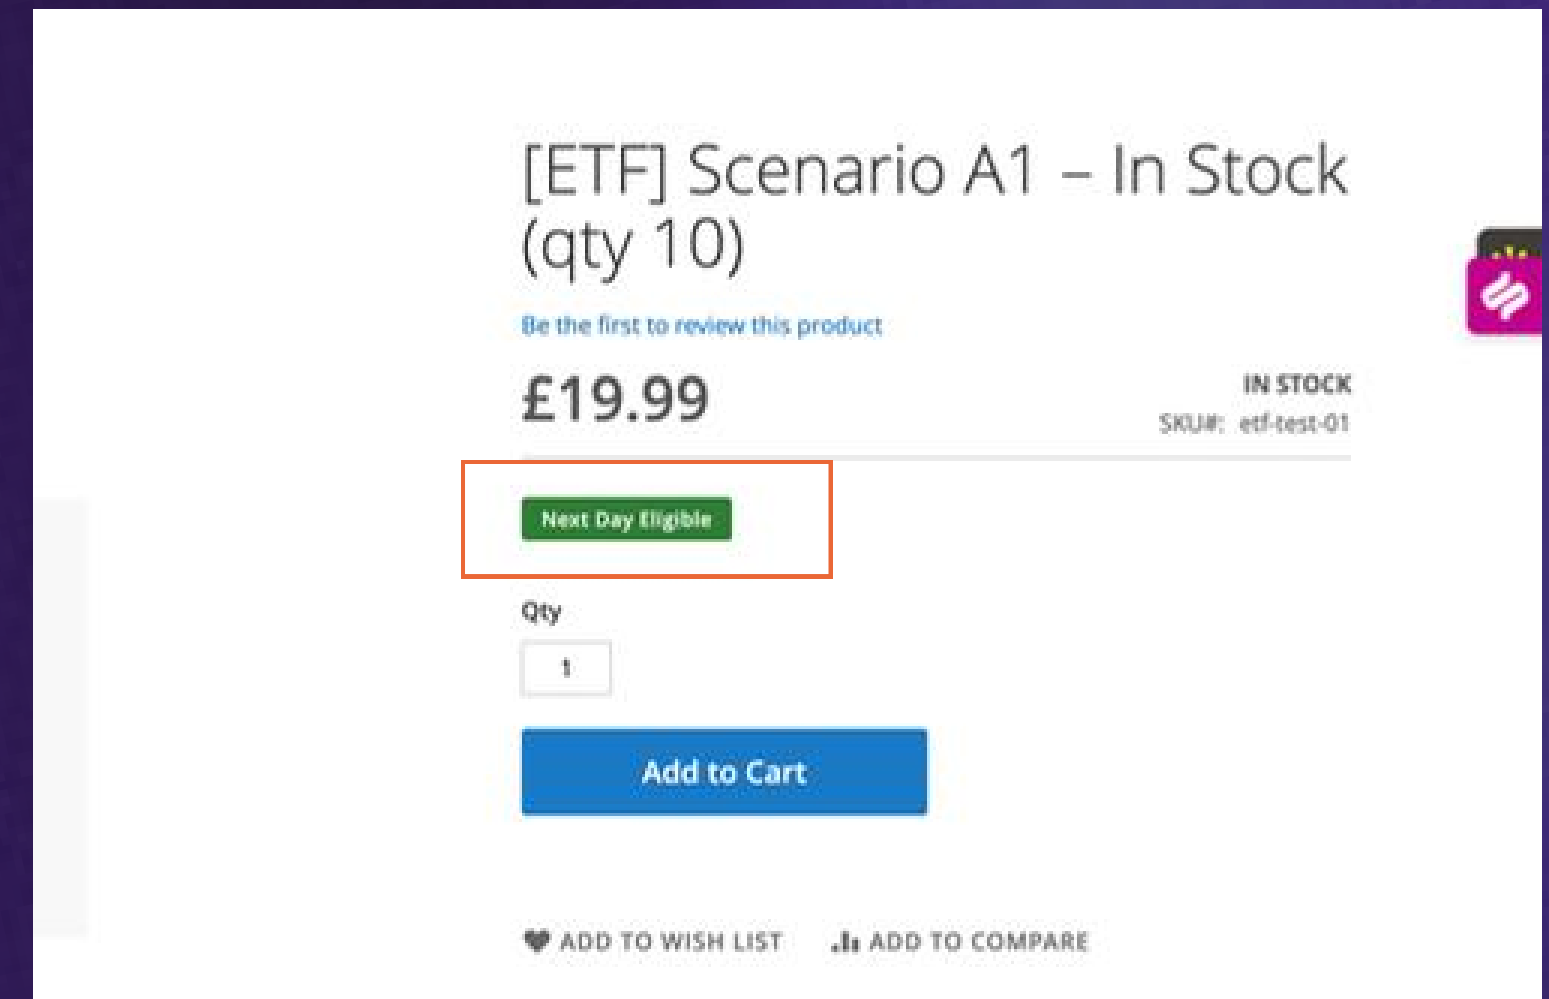

A coloured badge is rendered just below the product price on the product detail page.

Eligible product (green badge)

When a product is in stock with $\text{qty} \geq 1$, OR has `drop_ship_eligible = Yes`, the badge reads "Next Day Eligible" (green).

Non-eligible product (grey badge)

When a product is out of stock AND drop-ship is No, the badge reads "**Standard Delivery Only**" (grey).

Eligibility logic

next_day_eligible = (qty > 0 AND stock_status = in_stock)
OR (drop_ship_eligible = Yes)

Stock state	Drop-Ship Eligible	Result
In stock with qty ≥ 1	—	Eligible
Out of stock or qty = 0	No	Not eligible
Out of stock or qty = 0	Yes	Eligible (supplier ships directly)

Checkout Behaviour

If any item in the customer's cart has `next_day_eligible = No`, all method codes listed in section 7.1 are removed from the available shipping rates. This applies to the standard one-page checkout, the REST API, and any headless integration.

Multi-shipping checkout:

When a customer ships items to multiple addresses, each address is evaluated independently. An address with all-eligible items keeps next-day shipping options, even if a different address in the same order has a non-eligible item.

Using This Extension Together With Backorder Shipping Restrictor

If you also install **ETechFlow_BackorderShippingRestrictor**, both modules can work together to give you precise control over which orders qualify for fast shipping. The two modules look at different signals — Next Day Eligibility looks at stock and drop-ship; Backorder Shipping Restrictor looks at current backorder status — so when a product is OOS-but-drop-ship, the two modules can disagree. To resolve this cleanly, the Backorder Shipping Restrictor module ships with a **Skip Drop-Ship Products** option that respects the drop_ship_eligible flag set by this module.

Recommended setup when both modules are installed

1. Install both modules following each module's installation guide.
2. In the Next Day Eligibility module, mark all supplier-fulfilled products with **Drop-Ship Eligible = Yes** on their product edit page.
3. In this module's settings — **Stores → Configuration → eTechFlow → Backorder Shipping Restrictor → General Settings** — set **Skip Drop-Ship Products = Yes**.
4. Save and flush cache.

With this setup, drop-ship products always:

- Show the green "Next Day Eligible" badge on the product page (Next Day Eligibility module)
- Keep all shipping methods at checkout, even when local stock is zero (this module respects the drop-ship flag)

Use case — “Auto Remote” supplier

A retailer sells parts. Half the catalog is stocked in their warehouse; the other half is drop-shipped from a supplier called Auto Remote, who ships the same day directly to the customer.

Without combined config	With combined config
OOS local stock + drop-ship product → grey badge, express shipping blocked by Backorder module → bad UX, lost express revenue	OOS local stock + drop-ship product → green badge, all shipping methods available → customer gets next-day delivery from supplier

Decision matrix

Cart contents	Skip Drop-Ship = No (default)	Skip Drop-Ship = Yes
Only in-stock items In-stock + backorder (no drop-ship) In-stock + backorder (drop-ship Yes) Only drop-ship items, all OOS	All methods visible Restricted methods removed, notice shown Methods removed, notice shown Methods removed, notice shown	All methods visible Restricted methods removed, notice shown All methods visible, no notice

Recommendation: If you also use the Next Day Eligibility module and have drop-ship products, set Skip Drop-Ship Products = Yes so the two modules agree.

Standalone use: This module works perfectly fine without the Next Day Eligibility module installed. The Skip Drop-Ship Products setting simply has no effect when the drop_ship_eligible attribute does not exist.

Uninstallation

If you want to delete the eligibility attributes and their stored data:

```
php bin/magento eav:attribute:remove next_day_eligible  
php bin/magento eav:attribute:remove drop_ship_eligible
```

Disable and remove the module

```
php bin/magento module:disable ETechFlow_NextDayEligibility  
composer remove etechflow/module-next-day-eligibility # Composer install only  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento cache:flush  
If installed manually, also delete the directory:  
rm -rf app/code/ETechFlow/NextDayEligibility
```

Troubleshooting

Next Day Eligible" badge does not appear

- Hard-refresh the page (Cmd+Shift+R or Ctrl+Shift+R) — your browser may have cached the old page
- Run `php bin/magento cache:flush`
- Verify the module is enabled: `php bin/magento module:status ETechFlow_NextDayEligibility`
- Check `var/log/exception.log` for module-related errors

Next-day method is still showing despite OOS items

- Verify the method code matches the carrier/method code (e.g. `ups_NEXTDA` not `ups_nextda`) — codes are case-sensitive
- Confirm the OOS product is not flagged Drop-Ship Eligible = Yes (that intentionally bypasses the restriction)
- Reindex: `php bin/magento indexer:reindex`

Eligibility didn't update after I changed Drop-Ship

- The product save observer recomputes eligibility on every save where the drop-ship value changes.
If your save did not actually change the value, no recompute runs.
- Force a refresh by saving the stock item (any qty change works).
